The ACS COT
Structure and Function

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

To Serve All With Skill and Fidelity

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Vision

The COT strives to be a resource for our profession and other entities, professional, public, and governmental, in topics concerning trauma prevention and care. The COT's major areas of activity should include education, standards of care, quality of patient care, and financial assessment of care. The scope of its activities will be national and international.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Mission

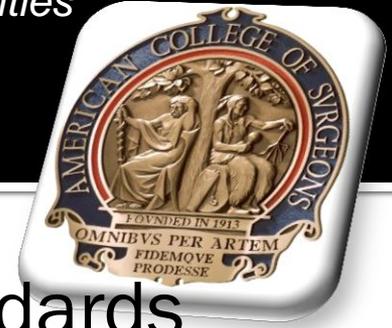

The mission of the COT is to develop and implement meaningful programs for trauma care in local, regional, national, and international arenas. These meaningful programs must include education, professional development, standards of care, assessment of outcome, and financial accountability.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Objectives

- Leadership in Development of Standards for Trauma Care
- Trauma Education
- Develop Measurement Tools for Trauma Hospitals and Inter-hospital Comparison
- Development of Trauma Systems
- Foster and Develop Trauma Prevention
- Develop Trauma Group Relations

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Components

•Leadership

- Medical Director
- Chair
- Vice Chair
- Membership

•Information

Tangible Work Product!

“Productivity is never an accident. It is always the result of a commitment to excellence, intelligent planning, and focused effort.”

Paul J. Meyer

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Resources for Optimal Care of the Injured Patient: 1976-2006

Optimal hospital resources for care of the seriously injured

The responsibility for providing optimal hospital resources for the care of the seriously injured rests primarily with hospital administrators, physicians, and nurses. Emergency department facilities with specialty-trained personnel and a wide range of specialty services are essential. In addition, hospital resources specifically meant to manage surgical and non-surgical staff, including trauma and critical care, and specialized services, such as interventional radiology, must be available at all times, and additional staff for use in other units, providing room facilities for resuscitation, critical care, and other services, and other health services, as well as an emergency department, should be available. Hospital resources for the care of the seriously injured, however, are not optimal unless they include clearly defined educational and continuing medical education programs for emergency physicians and non-emergency physicians, and other staff, and an emergency response program designed to improve the care of trauma patients. Criteria to define these requirements are listed in Table 1.

In brief . . .

Optimal hospital resources for care of the seriously injured, as a report of the American College of Surgeons on Trauma of the American College of Surgeons in response to a charge by the Surgeon General of the U.S. Department of Health and Human Services on June 6, 1976. The report is available in French and Spanish. The report is published in the Bulletin of the American College of Surgeons. The Board of Regents and the staff have prepared this report for the Surgeon General and the American College of Surgeons. The design of optimal facilities is important. All hospital facilities, including educational and medical staff, as well as hospital staff, and their health planning agencies, must be involved with the hospital in these guidelines.

Reprinted from Bull Am Coll Surg 1976; 61:1049-1052.

Purple Heart

The United States Military Joint Trauma System Assessment: A Presentation to the Defense Health Board

Washington, DC
14 November 2011

Michael Rotondo, MD, FACS
Chairman, American College of Surgeons Committee on Trauma

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

The United States Military Joint Trauma System Assessment

A Report Commissioned by the US Central
Command Surgeon

Sponsored by Air Force Central Command Surgeon

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Vision

That every soldier, marine, sailor, or airman injured on ANY battlefield or in ANY theater of operations has the optimal chance for survival and maximal potential for functional recovery.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Continuum of Care: 2011

Construct

- Team of trauma system experts visited theater to conduct trauma system review and participate in Theater Trauma Conference
- US CENTCOM SG invitation; US AFCENT SG, US TRANSCOM SG, USAISR JTS, JTTS, and TF MED Support
- Visit Role II/III MTFs and evacuation units 2 – 12 October 2011
- Provide report of findings and recommendations to US CENTCOM SG

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

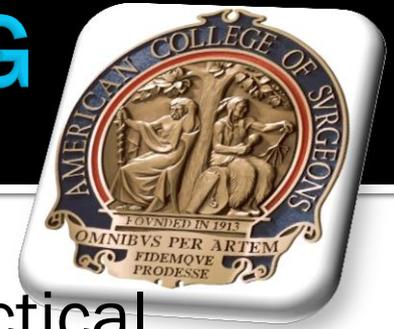

Military Trauma Systems Review Team

- **Michael Rotondo, MD, FACS**, Professor and Chair, Department of Surgery, The Brody School of Medicine, East Carolina University and Director, Center of Excellence for Trauma and Surgical Critical Care, Chairman, American College of Surgeons, Committee on Trauma
- **Thomas Scalea, MD, FACS**, Francis X. Kelley, Professor of Trauma, University of Maryland School of Medicine, and Physician and Chief, R. Adams Cowley Shock Trauma Center, Baltimore, MD.
- **Lt Col Anne Rizzo, MD, FACS, USAFR**, Associate Professor of Surgery, Virginia Commonwealth University, Vice Chair, Department of Surgery and Associate Surgical Residency Program Director; Associate Professor of Surgery, Uniformed Services University of the Health Sciences.
- **Kathleen Martin, MSN, RN**, Trauma Nurse Director, Landstuhl Regional Medical Center, Germany and is the Society of Trauma Nurses' Board of Directors' Chair of the Trauma Outcomes and Performance Improvement Committee.
- **Col Jeffrey Bailey, MD, FACS**, Director-Designate, Joint Trauma System, US Army Institute of Surgical Research (USAISR)

Military Trauma Systems Review Team

The Report to US CENTCOM SG

A strategic report to provide a platform for tactical development for the future direction of the Joint Trauma System (JTS), the US CENTCOM and future Joint Theater Trauma Systems (JTTS), including:

- Optimal elements
- Integration
- Sustainment

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Background

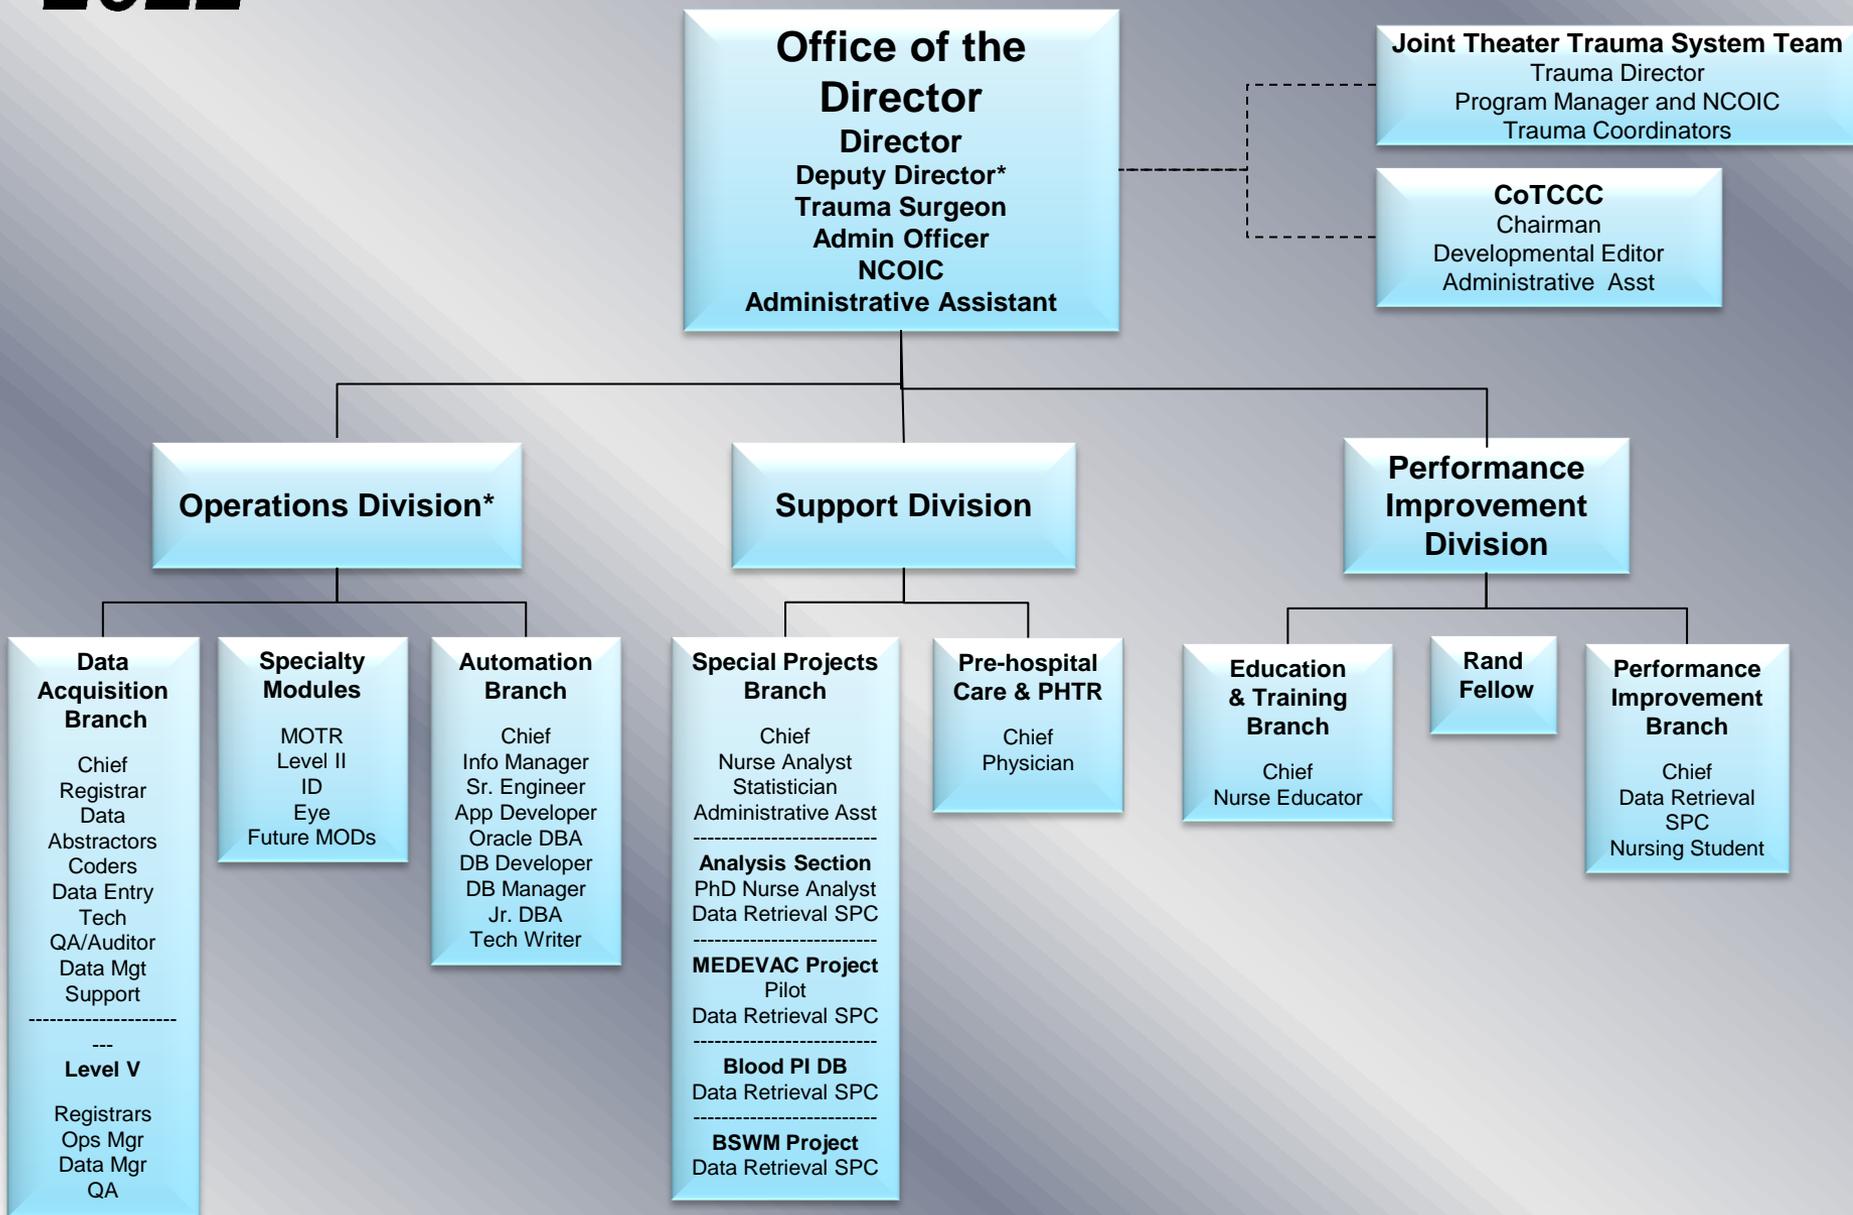

- US CENTCOM “JTTS” implemented to structure trauma care in theater
- Initial efforts focused on theater ops: expanded to include CONUS care
- Continuity and guidance for JTTS at USAISR
- USAISR organization designated “JTS” to distinguish its global mission

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Friendly Unknown NBC

TO TIME

RESIDENCY	ORAL DRUGS	MANAGEMENT/STATUS	PATIENT'S LAST NAME	MEDIC	UNIT
EXERCISE/ASSESSMENT	ASSESSMENT BASED ON MEDICAL	CATEGORY OF PATIENT	PRETREAT	ADULT	
OTHER BLOOD PRODUCTS	ASSESSMENT BASED ON MEDICAL	NEUROLOGICAL	ALLERGY	YORBA	

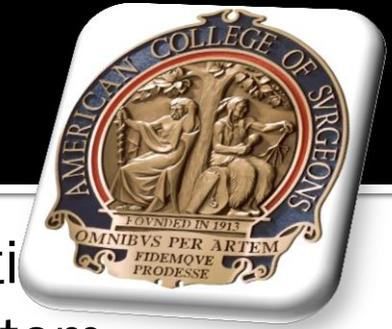

TO TIME

GSW 1 TIME AVPU PUPLS

The image shows several overlapping medical forms and diagrams. On the left, there are two anatomical diagrams of a human torso with yellow highlights. In the center and right, there are various data tables and forms with handwritten notes and checkboxes. One form has a header "TO TIME" and another has "TO TIME" in a box. The forms appear to be part of a medical record or assessment tool.

Overarching Principles: Systems Theory

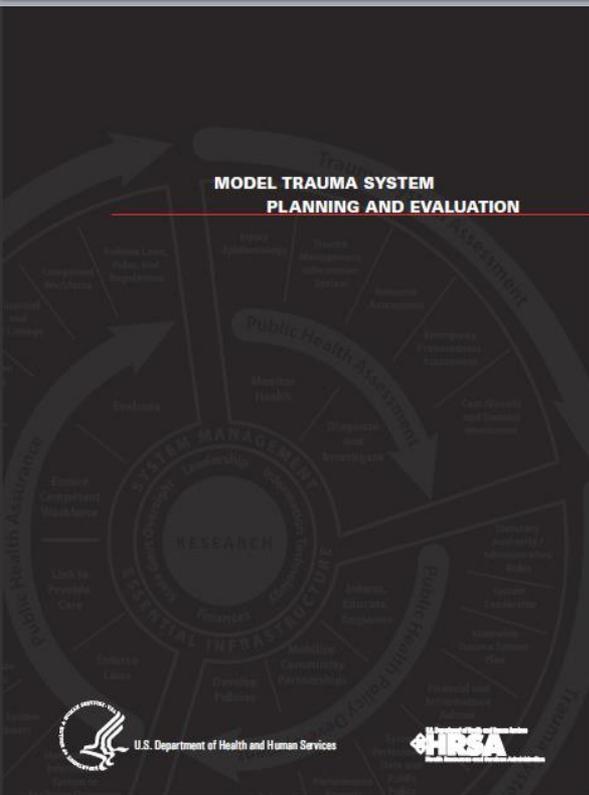

- Elemental components *as well as* the interactions among those components as it relates to primary system function.
- Even if the elements function effectively, it does NOT necessarily mean that the system is functioning optimally.
- The system can only function optimally if individual elements are linked through infrastructure that demonstrates effective relational function among elements.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Overarching Principles: Systems Theory *Assessment* – *Policy Development* – *Assurance*

C-130 Fever

Clinical Excellence

*Obvious at the
Elemental/Component Level*

- Committed leadership
- Committed clinicians
- Teamwork

- *Damage Control Approach*
- *CABC*
- *MDR Microbes*

*NOT Obvious at the
System Level*

- Fully integrated infrastructure
- Lead agency to knit the components together

Priority

The war fighters control the battle space and require ultimate flexibility to achieve their objectives.

Wounded warriors must receive the responsive, nimble state of the art care regardless of distance, geography, weather or tactical situation.

These are not mutually exclusive...both require resources.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Critical Observations and Recommendations

- JTS Authority
- Communication and Cohesion
- Informatics
- Performance Improvement
- Clinical Investigation
- Training

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

JTS Authority

Observations:

- JTS has no authority to develop or set policy or standards for trauma care
- No authority to implement a verification process for facilities or the system
- Does not function as DoD level asset

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

JTS Authority

Recommendations:

- Establish JTS as the statutory lead agency and DOD authority to set policy and enforce standards of excellence in the care of the injured.
- DOD delegated authority to recommend external system review
- JTS should be elevated within the DOD in order to align its position with its joint and global responsibilities

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Communication and Cohesion

Observations:

- Clinical personnel spend large volumes of time performing clerical tasks reducing efficiency, delaying transfer and creating frustration
- Transmission of important clinical information like radiographs is difficult
- Clinicians encounter resistance when attempting to transfer patients

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Communication and Cohesion

Recommendations:

- Clinical information sharing between colleagues and the every other weekly trauma directors' conference should be consolidated/enhanced
- Trauma conferences such as those held recently at Kandahar is one such example that significantly enhanced system cohesion; should be replicated
- VTC should be focused on providing patient outcomes to all providers as a potent communication forum

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Informatics

Observations:

- There is no unified, contiguous electronic health record across the military continuum of care
- Limited capability for consistent collection of data on all injured war fighters across the continuum
- Capabilities for performance improvement across the system are primitive at best

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Informatics

Recommendations:

- Develop an expeditionary EMR that is facile, readily taught, increases productivity, and is secure, web based/instantly visible from all levels
- Resource to allow concurrent data collection across full continuum
- Enhance JTTR capability for real time PI

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Performance Improvement

Observations:

- The trauma performance improvement and patient safety process is fragmented
- Efforts to implement rudimentary trauma related PI were present at each military trauma facility
- Varied evidence of effective communication of PI events or trends across the system
- No clear metric to link performance for the optimal outcomes

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Performance Improvement

Recommendations:

- The JTS must develop an overarching PI and Patient Safety Plan
- System wide process for event identification, development of corrective action plans, methods of monitoring, reevaluation and bench-marking
- Enhance accountability for performance related to care of injured

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Clinical Investigation

Observations:

- The interface between PI and research is indistinct
- The protocol execution process is lengthy
- The investigation proposal process is poorly understood
- There are multiple DB, not all communicate
- The JTS does not have executive oversight of trauma related clinical investigation
- There is little or no relationship between the JTS, JTTS and the IRB process

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Clinical Investigation

Recommendations:

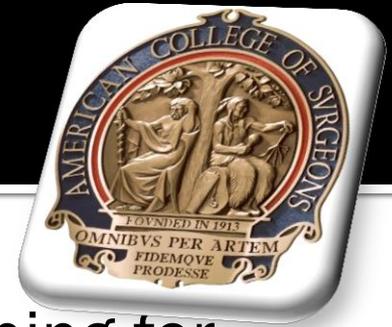

- The PI and research missions and proposal process must be reconciled to allow for unencumbered investigation
- The IRB process should be significantly streamlined
- All requests for clinically important data should be coordinated with JTS Director who should be charged with oversight of DoD trauma related clinical investigation

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Pre-Deployment Training

Observations:

- There is no consistent pre-deployment training for medical personnel
- Current training is largely focused on combat skills
- Tactical “matching” of clinical expertise with deployed assignment could be improved
- Trauma training that exists focuses on individual, as opposed to team training
- The JTS has no authority to specify pre-deployment trauma training requirements

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Pre-Deployment Training

Recommendations:

- Improve balance of combat skills and trauma training
- Align specialty and skill with deployed responsibility
- Establish consistent pre-deployment training to include leadership and clinical personnel
- Scale training to combat casualty care and system experience, knowledge, and skill
- Trauma directors at every Role 3 facility should have leadership and combat surgery experience
- The JTS should have oversight on standards of pre-deployment trauma training

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Team Transition Training

Observations:

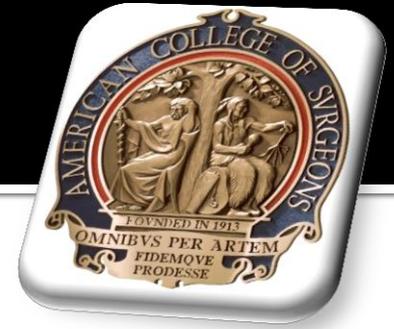

- Each theater of operation has a unique role, terrain limitations and institution specific practices
- Effective team transition is not always possible due to logistics

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Team Transition Training

Recommendations:

- Units should consistently develop a manual or equivalent repository of updated institution specific information
- Hand off between providers should be assured with sufficient time for effective team transition

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Conclusions

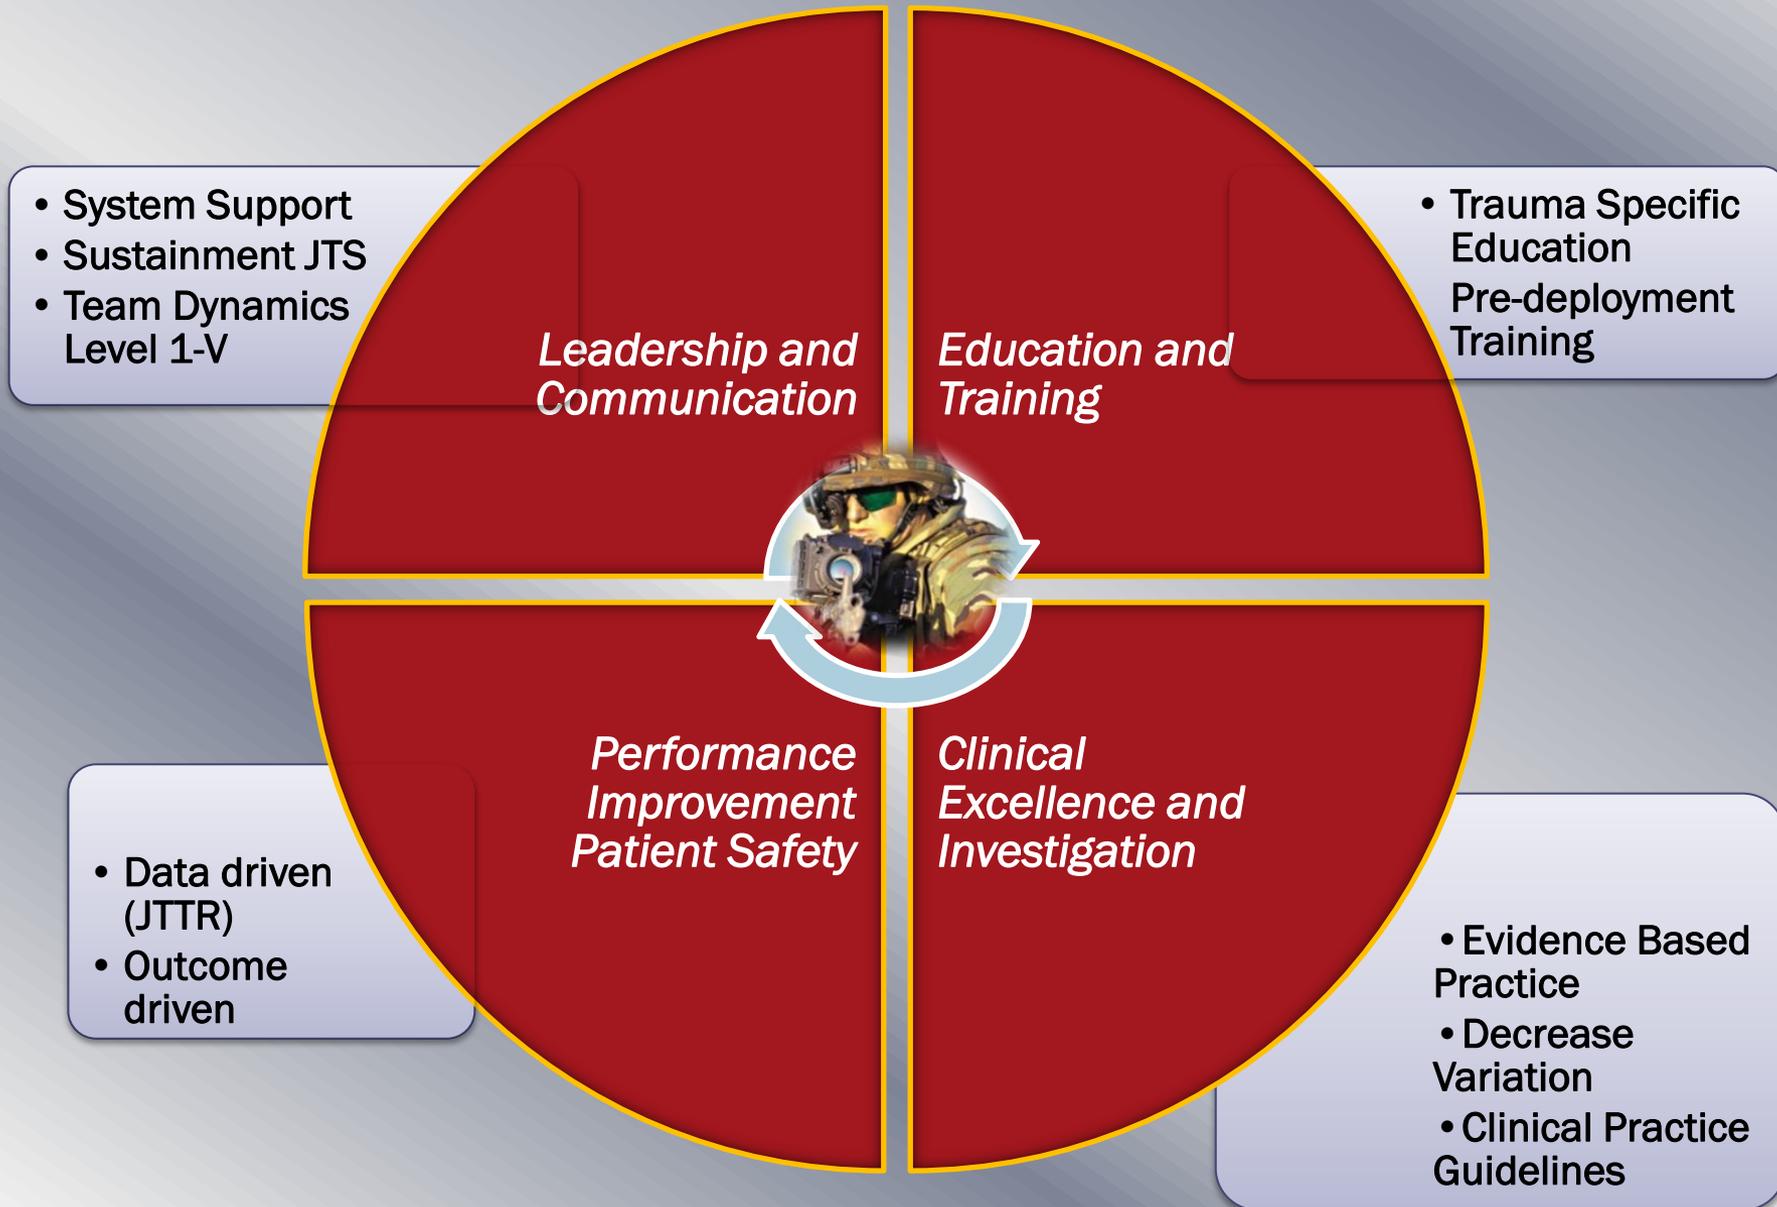

- Seek support of the leadership of the uniformed services, and civilian leadership in the DoD, for fundamental change in the command structure to enable the JTS as the lead agency for assessment – policy development – assurance
- The way ahead...
 - Obtain leadership *commitment*
 - *Transform* the Joint Trauma System
 - *Sustain* the JTS beyond transformation

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

Obtain Commitment in Key Domains

Transform the US Joint Trauma System

A Joint Trauma Performance Enhancement and Clinical Excellence Campaign

Redesign the System

- Oversight by the Defense Health Board
- Command and Control
- JTS as the Lead Agency

Define the Culture

- Wartime structure
- Peacetime structure
- Joint Interdependence
- Relationship w/ACS COT

Define the Authority

- Role of the JTS Director
- Reporting structure
- Joint ness

Invest for the Future

- Focus Technology
- Funding
- Turnover
- Communication
- Pre Deployment Training
- Sustainment
- Lessons Learned

Optimize Capabilities

- JTS Systems
- JTS Operations
- Tactical Implementations
- Enduring Currency

right Patient, right Place, right Time, right Care

Why should the JTS Lead?

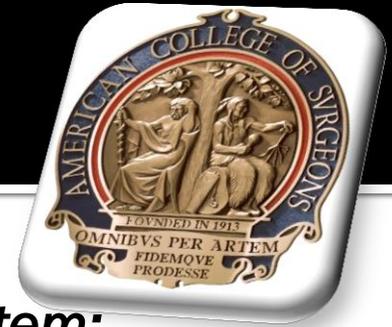

Military medical commanders at all levels, from Level II to Level V facilities are excellent leaders and have facilitated some of the JTTS work. Those commanders come from a great variety of backgrounds and are called upon to serve at these levels due to their leadership skills. While their focus is on achieving the mission to field the best possible health care center, their leadership training paradigm is appropriately focused on the essentials of personnel, logistics, execution, order and discipline. JTS excels at the current state of trauma affairs, has the corporate memory of all the health care teams that have deployed and re-deployed, the most current and the comparative historical data trends and all versions of the Clinical Practice Guidelines.

AMERICAN COLLEGE OF SURGEONS

Committee on Trauma

The Next Steps

- Complete the document entitled: ***“Joint Trauma System: Development, Conceptual Framework, and Optimal Elements”***; publish as ACS manual
- Create a ***JTTS Operations “Field Manual”***: describe structure, function and tactical deployment of JTTS
- Create a ***Tactical Implementation Plan*** to achieve the strategic goals with milestones for the immediate (6 months), intermediate (18 months) and long term (36 months); *expectation that this plan will be completed by the end of three years*
