

DEPARTMENT OF DEFENSE (AFHSC) Seasonal Influenza Surveillance Summary

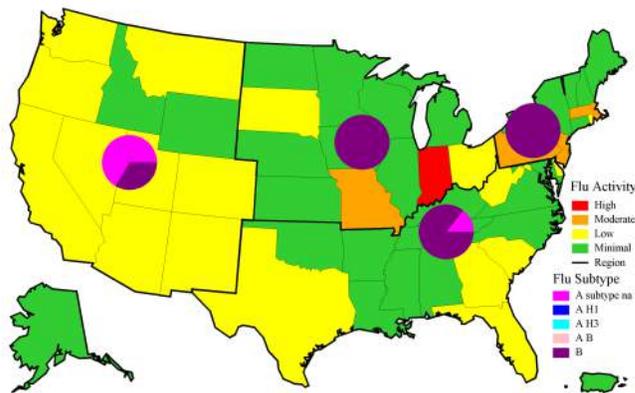

Northern Command -- Week 14 (05 April— 11 April 2015)

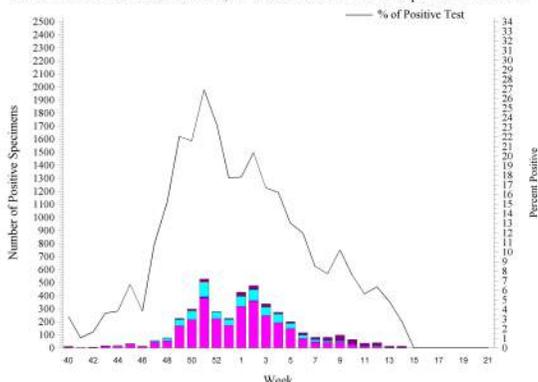

NORTHCOM week 14^{1,2}

- ◆ Influenza activity continues to decrease to baseline levels in most areas. However, Indiana is still experiencing high activity levels.
- ◆ While A/H3N2 viruses have been most common this season, an increase in influenza B viruses has been identified in recent weeks.
- ◆ Of those positive in week 14, 84% were identified as flu B.
- ◆ ILI and P&I activity in service members was slightly above baseline.
- ◆ The cumulative percentages of positive lab tests remained stable from week 13 to week 14. The rates were 14.7% for service members and 15.7% for dependents.

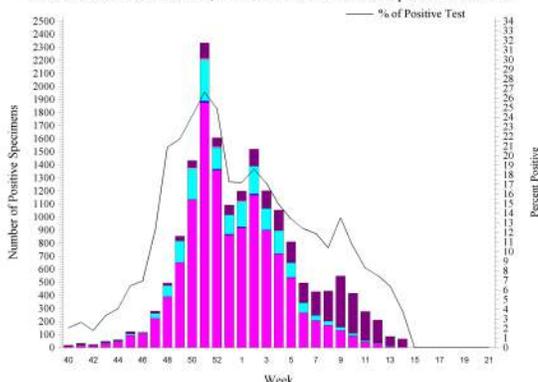

NORTHCOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks

NORTHCOM Service Members, Influenza Positive Tests Reported to AFHSC

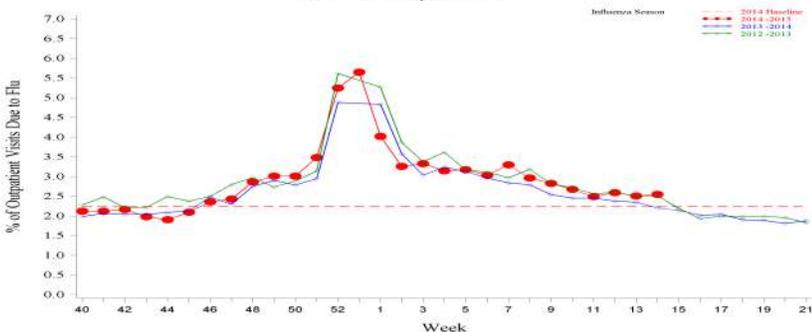

NORTHCOM Beneficiaries, Influenza Positive Tests Reported to AFHSC

2014 – 2015 NORTHCOM Season Totals^{1,2}

	A/H1N1	A/H3N2	A/Untyped	Flu B	% Positive
Service Members	12	759	2868	408	14.7
Dependents	55	2241	12004	2885	15.7

NORTHCOM Service Members, 2014-2015 and Previous 2 Influenza Seasons ILI and P&I Outpatient Visits

Immunization Coverage for all Commands (As of 05 March 2015)

All components	All Services	Army	Marines	Navy	Coast Guard	Air Force
Seasonal Influenza Vaccine	95%	93%	95%	96%	97%	99%

European Command -- Week 14

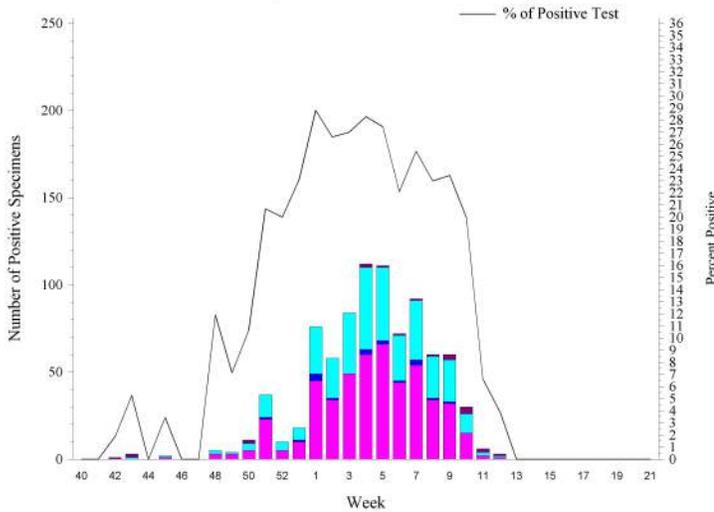

EUCOM week 14^{1,2,4,5}

- ◆ Influenza activity continued to decrease as was at minimal to low levels.
- ◆ A/H3N2 viruses continue to be the predominant subtype this season. Although, flu B has become more prevalent in recent weeks.
- ◆ ILI and P&I activity decreased and was at baseline.
- ◆ The cumulative percentage of positive lab tests for service members and dependents was 20.7% and 18.9%, respectively.

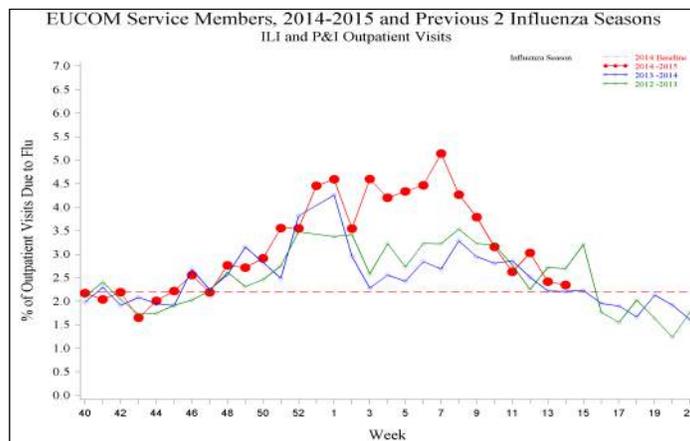

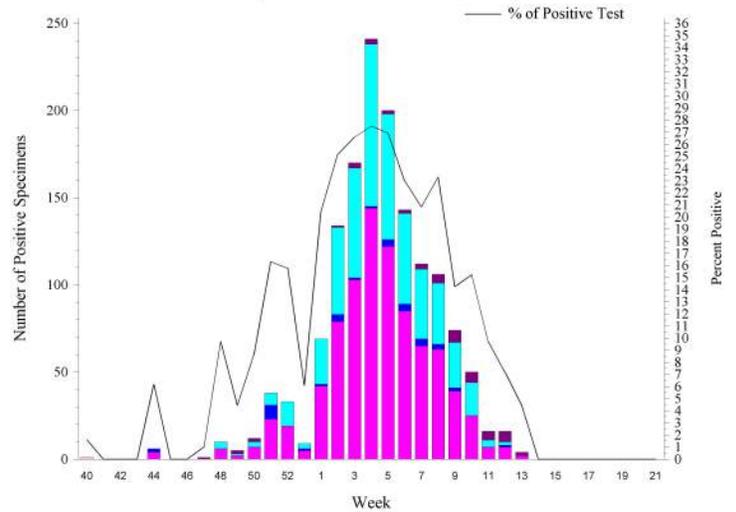

EUCOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks

EUCOM Service Members, Influenza Positive Tests Reported to AFHSC

EUCOM Beneficiaries, Influenza Positive Tests Reported to AFHSC

2014-2015 EUCOM Season Totals ^{1,4,5}						
	A/H1N1	A/H3N2	A/Untyped	Influenza B	AB	% Positive
Service Members	18	330	486	21	0	20.7
Dependents	36	514	849	50	1	18.9

Pacific Command -- Week 14

PACOM week 14^{1,2,6,7}

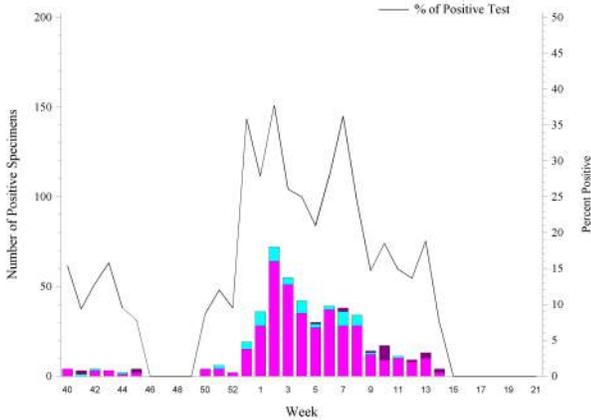

- ◆ Moderate influenza activity was seen in Hawaii and there was minimal activity throughout the rest of PACOM.
- ◆ ILI and P&I activity decreased slightly and remained below baseline.
- ◆ The cumulative percent of positive lab tests for service members and dependents was 21.8% and 24.9%, respectively.

PACOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks South Korea and Japan

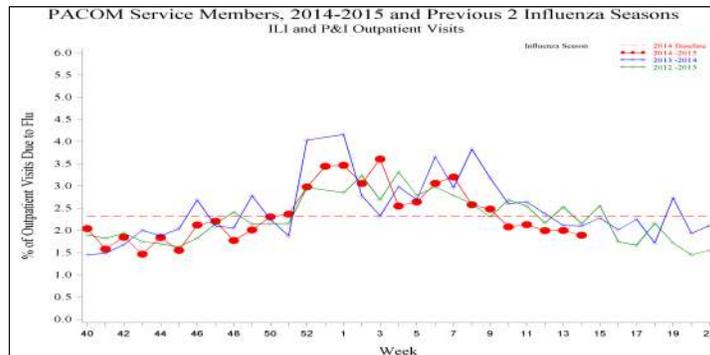

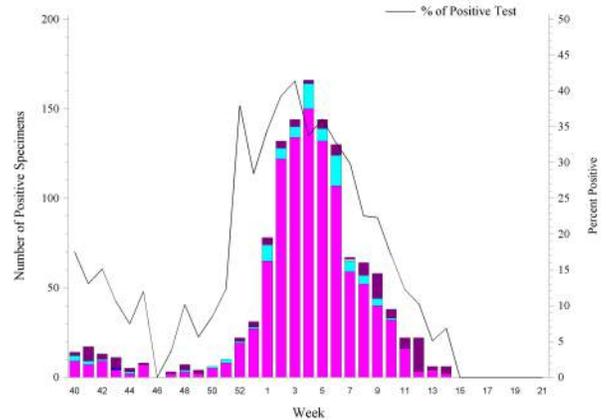

PACOM: GUAM and HI Influenza activity and HL7 Test Positive						
Area Name	Influenza Activity	HL7 Type				
		A(H1)	A(H3)	A Untyped	B	AB
GUAM	1:Minimal	0	0	0	0	0
HI	3:Moderate	0	0	1	2	0

PACOM Service Members, Influenza Positive Tests Reported to AFHSC

PACOM Beneficiaries, Influenza Positive Tests Reported to AFHSC

2014-2015 PACOM Season Totals ^{1,6,7}					
	A/H1N1	A/H3N2	A/Untyped	Flu B	% Positive
Service Members	0	56	387	22	21.8
Dependents	1	88	1022	116	24.9

Central and Africa Commands -- Week 14

CENTCOM and AFRICOM week 14^{1,2,8,9}

- ◆ Influenza activity was minimal in CENTCOM and AFRICOM.
- ◆ ILI and P&I activity was below baseline and previous seasons.

CENTCOM, Influenza Activity, During the Last 2 Weeks

Southern Command -- Week 14 (Local Nationals Only)

In SOUTHCOM during week 14¹⁰

- ◆ Influenza activity remains low.

2014-2015 SOUTHCOM Season Totals Among Local Nationals ¹⁰

Description:

Maps, figures and tables are stratified by Combatant Commands (CCMD). The map provides a measure of influenza activity by state or country within each CCMD for the past two weeks for service members. Influenza activity is defined by the percentage of outpatient visits associated with influenza (defined as having an Influenza-like Illness (ILI) or Pneumonia and Influenza (P&I) diagnosis) for each week compared to baseline levels of influenza activity. Additionally, a pie graph by US region or country is generated to display the distribution of influenza types and subtype identified from positive laboratory tests for the past two weeks combined.

Influenza activity: Percentage of Outpatient Visits Associated with Influenza:

The percentage of all outpatient visits for influenza (defined as having an ILI or P&I diagnosis) is calculated each week for (1) all service members, regardless of component and (2) all other DoD beneficiaries. This data is presented as a map of the past two weeks' activity and a figure to display the entire season's data compared to the two prior seasons and baseline. For the map, the activity level compares the mean reported percent of visits due to influenza for the past two weeks to the mean reported percent of visits due to influenza during baseline weeks. Baseline weeks are defined as non-influenza weeks (weeks 22-39) over the past 3 years.

There are four activity levels reported on each map. The activity level corresponds to the number of standard deviations (SD) below, at or above the mean for the current week compared to the mean of the baseline weeks. Activity levels are classified as minimal, low, moderate, and high. Minimal activity corresponds to an influenza percentage that is less than 2 SD above the mean. Low activity corresponds to an influenza percentage that is equal to or greater than 2 SD above the mean, but less than 4 SD above the mean. Moderate activity corresponds to an influenza percentage that is equal to or greater than 4 SD above the mean, but less than 6 SD above the mean. High activity corresponds to an influenza percentage that is equal to or greater than 6 SD above the mean.

Influenza Positive Tests:

Only lab results from PCR or viral culture assays are reported. Influenza types/subtypes are categorized as influenza A not subtyped (A subtype na), influenza A/H1 (A H1), influenza A/H3 (A H3), influenza A and B co-infection (A B), and influenza B (B).

Map: Each US region or country with available data contains a pie chart that displays the distribution of influenza types and subtypes for that area for the past two weeks combined. Two weeks of data are combined instead of using just the current week's data due to delays in reporting of laboratory results.

Figure and Table: Each week, using the total number of influenza laboratory tests performed and the positive test results, the proportions positive for each serotype of influenza are calculated for service members and dependents separately.

Data Sources and Case Definitions:

Medical encounter and demographic data from the Armed Forces Health Surveillance Center's (AFHSC) Defense Medical Surveillance System (DMSS) are used to generate this report. In addition, health-level 7 (HL-7) laboratory data is provided by the Navy and Marine Corps Public Health Center (NMCPHC) EpiData Center Division. ICD-9 codes from outpatient encounters are used to identify influenza activity. The outcome of influenza is defined using the combined codes for ILI (79.99, 382.9, 460, 461.9, 465.8, 465.9, 466.0, 486, 487.0, 487.1, 487.8, 488, 490, 780.6, or 786.2) and P&I (480-488). An individual can only be counted as a case once per week.

NORTHCOM Regions:

The regions on the NORTHCOM map (bold, black outlines) are defined using the four US Census regions, with the exception of Hawaii and Guam which are a part of PACOM. *Northeast:* Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont, New Jersey, New York, Pennsylvania, Puerto Rico, and the U.S. Virgin Islands. *South:* Delaware, the District of Columbia, Maryland, Virginia, West Virginia, Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Arkansas, Louisiana, Texas., and Oklahoma. *Midwest:* Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin, Iowa, Kansas, Missouri, Nebraska, North Dakota, and South Dakota. *West:* New Mexico, Colorado, Montana, Utah, Wyoming, Arizona, California, Nevada, Alaska, Idaho, Oregon, and Washington.

(All data are preliminary and subject to change as updated data is received)
